Industry Oriented Project

[R24 REGULATION]

AYURVEDIC DIET PLANNER

ABSTRACT

The Ayurvedic Diet Recommendation System is a web-based application developed to provide personalized diet suggestions based on a user's health information. The system collects basic details such as name, age, height, weight, and selected health issues, and then calculates the user's Body Mass Index (BMI) to determine their health category. Based on this information, the application recommends suitable Ayurvedic food items and suggests foods that should be avoided for better health management. The system is developed using Python with the Flask framework, along with HTML and CSS for the user interface, and SQLite database to store patient details and health records. The main goal of this application is to promote healthier dietary habits using Ayurvedic principles while providing a simple, efficient, and user-friendly platform for users.
